

# DIGITAL RETINAL PHOTOGRAPHY

IMPROVING PATIENT CARE WITH NEW TECHNOLOGY

We are pleased to introduce the addition of a new instrument. Digital Retinal Imaging is a technology which allows viewing and photo documentation of inner eye structures (retina). This will promote earlier diagnosis of many abnormal vision conditions, some of which can result in impaired or permanent vision loss.

With the use of this technology, we are able to observe any normal or abnormal eye health issues over time.

This service is recommended to all patients for baseline testing. In addition to patients who are at high risk of developing eye disease, such as DIABETES, HYPERTENSION, MACULAR DEGENERATION, and GLAUCOMA.

\*Vision insurance DOES NOT reimburse for this service.

\*Medical insurance does pay for this service only when there is existing eye pathology.

Our fee for this service is \$20-. We highly recommend this service as an optional addition to your exam today.

Please indicate your preference:

\_\_\_\_\_ I would like DIGITAL RETINAL IMAGING TODAY

\_\_\_\_\_ I DO NOT wish to have DIGITAL RETINAL IMAGING.
